

A Lab Animal Data Analytics Workshop

Animal Resource Directors Meeting
Austin, TX
October 15, 2017

Steven M. Niemi, DVM, DACLAM

Where's the Evidence?? - Zach Freeman

“How to Design (and Analyze) a Business Experiment”

1. Identify a narrow question (*more focus is better*)
2. Use a big hammer (*avoid mere tweaks*)
3. Perform a data audit (*establish a baseline*)
4. Choose a study population (*select a sample*)
5. Randomize (*duh*)
6. Commit to a plan, and stick to it (*don't deviate*)
7. Let the data speak (*be brave, it'll be OK*)

O. Hauser and M. Luca, <https://hbr.org/2015/10/how-to-design-and-analyze-a-business-experiment>

Acknowledgements

(From Steve and Donna)

- My CCM Senior Team: Especially...
 - Mark Depathy: IT Oversight
 - Peter Chelton: Financing the Day; Coordinating MGH Resources
 - Cliff Gibbons: Was “Volunteered” to talk about his program within CCM
 - Gerry Cronin: Coordination of all follow-up publication and feedback survey
 - Rosa Pineda: For feeding us all day!
- Our Planning Team:
 - Nirah Shomer: Abstract Submission Management
 - Sai Tummula: Vision Translation > Planning

All of You!!

What We Heard....

- **Operational Equipment and Supply Management (Eliminating Non-value Added Work; Performance Standards)**
 - **Steve N: (Rack Management)**
 - 3 year implementation of “seamless” integration
 - take advantage of faster & simpler (cheaper) technologies ;TrackR (smart phones)
 - “no decision can be your best decision”
 - always be positive that change encounters resistance so make sure the benefits are appreciated...
 - **Zach F: (Cage Top Management):**
 - identified lack of data-driven standards for “acceptability”; comparative management with American Public Health Association standards applied
 - a rat is not a large mouse (once again)
 - Acceptable tops intervals could go out 90-120 days; 2 care techs + 3 cagewash FTEs/50000 cages/year saved
 - **Evan H: (Disinfectants Comparison MB-10 versus RESCUE RTU)**
 - Look beyond the price point of the product to the additional “hidden” costs (labor);
 - the “smaller” things (labeling, wear and tear on the bottles, improved compliance with contact times – BI-2, in/out facility)
 - accounting for “invaluables”
 - product confidence
 - ease of preparation (ready to use); no human error;
 - less opportunity for IACUC findings of expired labels...
 - **Ethan H: (RFID Technology Optimization)**
 - What really goes on during the day as far as total cages under care (census); daily is a “good look”
 - Assures “fairness” to the customer (pays for actual days in the vivarium)
 - Best to take RFID census before activity starts (people and metal equipment)
 - Find errors early so they can be resolved with staff around; “flood checks” of rooms offers easy manual scanning contingency directive

What We Heard....

- **Clinical Care and Compliance Management**

- Ida W:

- reminds us of the “real challenges” of managing adequate veterinary care
- Reconsideration of PPE > use less
- Use of iPod Touch >
 - < 1% inaccuracies/omissions;
 - < excessive work to the tune of > 50% reduction;

- Colleen T:

- “Technology is our Friend – Google Suite”;
- tracking services requests (surgical, lab submissions, etc.) challenges
- data mining of historical procedures > improved tracking and/or planning
- SLACK vs email...the future?
- “Using what you already have requires creativity”

- Eric H:

- Behavioral data generally seems to “sit idle”;
- “general dogma” is not objectively supported > Wound Score over Hour-long observations

- Sara F:

- The “monkey matcher”;
- shortages of “men” lead to combining of groups > fighting, decr birth rate;
- alternating males > allowed for group stability while maintaining a high Sire Conception Rate (SCR)

What We Heard....

- **Human Resourcing and Operational Management**

- Hiliary V:

- make scheduling visible > making work visible
- set factors for all room-based tasks needing to be completed

- Jason J:

- Introduced us to the concepts of “churn rate” and “frequency of churn”
- zeroed in on changes in the work that is not notable in overall census data review
- management can now better distribute the “right” amount of human resources

- John H:

- Automated Continuous Home Cage Monitoring Systems
- allows for “learning phase” where signally can be adapted to institutional standards
- ~40% reduction in cage changing when moving to evidence-based operations
- resources are used more effectively doing what they “should be” doing

- Leopoldo Z:

- shared with us how to evaluate durable/reusable versus one-use/“no processing” caging
- Is the lifespan of a durable cage (high breakage compared to disposable) = 6 years?
- Overall durable caging is often still the best options however there are specific cases where disposable is better

- Cliff G:

- Took us to the beginning of the human resources “value stream map”/process
- Showed how continuous evaluation of standard KPIs helps to know exactly how many hires are needed real-time
- Staffing Crisis can be avoided or minimized

- Victoria G/Dennis M:

- The Future.....

Next Steps.... Predictive Analytics...

VIVARIUM OPERATIONAL EXCELLENCE NETWORK

"WE LIVE AT THE EDGE OF THE MIRACULOUS"

- HENRY MILLER

The **VOE-Network** is
proud to
sponsor/host this
annual event.

As of **March 1**, the link will be available for VOE-Network Members;
For presenters' organizations (non-members), VOEN is offering:

90 Day Complimentary Membership
(February 1, 2018 – June 1, 2018)

Your Feedback Is Critical to our Continuous Improvement

Page 1: Analytics Conference Feedback

 Preview    

Analytics has become an invaluable tool for biomedical research organizations to leverage key business data to describe, predict, and improve business performance.

We now need your feedback on how to improve the Analytics Conference to maximize your time and experience and assist your performance as a leader.

 Edit

☒ This question has answer validation

View Conditions 

1. On a scale from 0 (no value) to 10 (high value), how would you rate value of the first Analytics Conference to giving you new ideas on how to manage your department or operations?

WHAT DID WE THINK WOULD HAPPEN?

- **HOPE:** We could create something...catalyst...cross-talk...
- **PLATFORM:** VOEN offers a place to document and continue the dialogue
- **EXPECTATION:** Find things of interest across many programs...copy as you wish
- **REALITY:** Novel experience...coming together to compare notes...
- **PARTICIPANTS:** To attend, you must participate...blessed with a wide-spectrum of inputs...
- **FUTURE:** The conversation will continue...
